

# DRY AMD LIGHT THERAPY GENTLE LIGHT. STRONGER SIGHT.

Valeda Light Therapy is the sole FDA and CE marked device for treating Dry Macular Degeneration, a common eye issue post-55, where retinal cells deteriorate, causing trouble with fine details and potentially leading to central vision loss.

## Dry AMD Symptoms:

-  Blurry or fuzzy vision
-  Straight lines appear wavy
-  Colours less vibrant
-  Difficulty adapting to low light
-  Loss of central vision

# What to Expect from Valeda Treatment

## Before Treatment

- No special preparation needed
- Remove glasses or contact lenses
- No discomfort during or after treatment

## During Treatment

- You'll sit comfortably in front of the Valeda system
- Guided through each step, treatment is quick and simple
- Takes less than 5 minutes per eye per session

## After Treatment

- You may notice a temporary “afterimage” (photostress) lasting 15–30 seconds
- You can return to normal daily activities straight away

## Treatment Schedule

- A full course is 9 treatments over 3–5 weeks
- Typically repeated every 4 months, as advised by your doctor

## Why Start Early?

Once retinal cells are lost, vision cannot be restored. Early treatment with Valeda helps protect and preserve retinal health.
